Sass

Back-end Technologies:

Node.JS, Mongo-DB,

Mongoose, Express

Other Technologies:

Figma, React Testing Library,

Jest, Vitest

Technical Experience

Markdown App

https://braxton-markdown-app.netlify.app/

A markdown editor that allows users to save, create and delete markdown files. Uses a Node.js api to save the documents.

Dev-Jobs Job Board

https://braxton-job-board-app.netlify.app/

A Job Board App that displays job listings from a local file. Utilizes data gathering and modularization to easily add new job listings.

Arch-Studios Landing Page

https://arch-studios-landing-page.netlify.app/

A landing page for a fake architecture company. Focus was on building a page from a design made in Figma.

Dine Reservation App

https://braxton-dine-reservation.netlify.app/
https://reservation-diner.netlify.app/

A web app for a fake diner needing an app that allows users to apply for reservations at their restaurant. There is a customer facing website that allows users to search the current menu and request reservations as well as a diner facing app that shows all current reservations and allows for them to be checked in. This is connected by a custom Node.js server. Focus was on making a product that could immediately used in the world

Conferences & Courses

Scrimba Frontend Bootcamp
Graduated in 2022

Career Objective

As a first job frontend developer, my primary goal is to find a position that will allow me to gain valuable experience and grow as a developer. My objective is to learn as much as possible from experienced mentors and to take on increasing responsibility as I develop my skills in coding, design, and project management
